

# Wash-Checks® Placement

Insert a Wash-Checks monitor (WC 101) into a Wash-Checks Holder (WC 102) completely. The front side of the monitor with red test soil will be visible in the holder window.

Position the Wash-Checks Holder face up inside a basket.

Place basket on a shelf in the washer. Vary positions and shelves of Wash-Checks placement cycle to cycle.

*We recommend monitoring every shelf on every washer each day for a machine release and using a minimum of one Wash-Checks per load for routine monitoring throughout the day.*
